

Serial No. 10/674,186

**Amendments to the Claims:**

Please amend the claims as set forth below without prejudice to applicant pursuing one or more of the claims as originally filed in a continuation application.

Claims 1-9. (Cancelled)

10. (Original) A medical device comprising:

a flexible member;

an end effector operatively associated with a distal end of the flexible member; and

a handle operatively associated with the proximal end of the flexible member;

wherein the handle comprises an actuator for operating the end effector through the flexible member;

wherein the handle is adapted to be gripped by a single hand and wherein the actuator is adapted to be operated by the same hand holding the handle while the thumb and index finger of the same hand are free to grip and advance the flexible member.

11. (Previously presented) The device of claim 10 wherein the end effector is selected from the group consisting of a biopsy forceps, grasping forceps, surgical scissors, extractors, washing pipes, needle injectors, non energized snares, and electosurgical snares.

12. (Previously presented) The device of Claim 10 wherein the flexible member has a length of at least 0.5 meter.

13. (Previously presented) The device of Claim 10 wherein the flexible member has a flexible shaft having a length of at least 1.0 meter.

14. (previously presented) The device of claim 10 in combination with a set of instructions for operating the actuator without the use of the thumb and index finger.

Serial No. 10/674,186

15. (currently amended) The device of Claim 10 wherein the actuator comprises a lever adapted to be squeezed between fingers of the same hand and a housing portion of the handle  
~~14 wherein the set of instructions is directly associated with the device.~~

16. (Previously presented) A system for operating a flexible endoscopic device with one hand comprising:

- an end effector;

- a handle;

- a flexible shaft extending intermediate the end effector and the handle;

- the handle comprising:

  - a housing adapted to be grasped by a single hand;

  - an actuator associated with the housing and operable by the hand holding the housing to actuate the end effector; wherein at least the thumb and index finger of the same hand holding the housing are free to grip and release the flexible shaft of the device;

  - and

- a set of instructions for using the handle with a single hand.

17. (Original) The system of Claim 16 wherein the set of instructions includes instruction to hold the handle between the palm and at least one finger other than the index finger and thumb.

18. (previously presented) The system of Claim 16 wherein the set of instructions includes instruction to use the thumb and index finger of the hand holding the handle to grasp the flexible shaft.

19. (previously presented) The system of Claim 16 wherein the set of instructions includes instruction to advance the flexible shaft using the thumb and index finger of the same hand holding the handle.

Serial No. 10/674,186

20. (Original) The system of Claim 16 wherein the set of instructions includes instruction to grasp the handle with the thumb pointing away from an end of the handle from which the flexible shaft extends.

21. (Cancelled)

22. (New) A medical device comprising:

a handle adapted to be gripped by a single hand;  
an elongate, flexible member extending from the handle, the flexible member having a proximal end and a distal end; and  
an end effector operatively associated with a distal end of the flexible member;

wherein the handle comprises an actuator for operating the end effector through the flexible member, and wherein the actuator is adapted to be operated by the same hand holding the handle and without use of the thumb or index finger of the same hand; and

wherein the handle comprises a release operable by the thumb or index finger of the same hand holding the handle.

23. (New) The medical device of Claim 22 wherein the release is disposed at a first end of the handle and wherein the elongate flexible member extends from second, opposite end of the handle.

24. (New) The medical device of Claim 23 wherein the actuator is disposed intermediate the release and the second end of the handle.

25. (New) The medical device of Claim 22 wherein the actuator is operable for closing the end effector and wherein the release is operable for opening the end effector.

Serial No. 10/674,186

26. (New) The medical device of Claim 22, wherein the medical device further comprises a ratchet mechanism, and wherein the release is adapted to disengage the ratchet mechanism.
